

# SAFETY SEAL®

## Get Back on the Road in Minutes

### SINCE 1964

## The Original and still the best!

In 1964, Safety Seal developed the first plug-type tire repair. Since then, many have tried to replicate it but no one can match the quality and reliability of the original. If you want a repair that lasts, choose Safety Seal.

- Each strand of yarn is individually coated for complete saturation
- Makes a perfect seal with the tire first time, every time
- Does not require dismounting of the tire
- Proven to outlast the tire in both US and EU testing
- No buffing that can damage the inner liner of the tire

## Fast and easy to get you moving!

When you have a flat, you probably don't have the ability to remove the tire to fix it. With Safety Seal, there's no need. Just plug the tire and you're ready to go.

Safety Seal can be used in minutes **without pulling the tire off the vehicle**. Just probe and plug, and it doesn't harm the inner liner, belts, or any other tire component.
